Hard Disk Video Recorder Installation Manual

1 Basic operation

Note: The button in gray display indicates nonsupport.

1.1 Turn on

Plug the power supply and turn on the power supply switch. Power supply indicator light shining indicates turning on the video recorder. After the startup you will hear a beep. The default setting of video output is multiple-window output mode. If the startup time is within the video setting time, the timing video recording function will start up automatically. Then the video indicator light of corresponding channel is shining and the DVR is working normally.

Note:1. Make sure that the input voltage corresponds with the switch of the DVR power supply.

2. Power supply demands: 220V±10% /50Hz.

Suggest using the UPS to protect the power supply under allowable conditions.

1.2 Turn off

There are two methods to turn off the DVR. Entering [main menu] and choosing [turn off] in the [turn off the system] option is called soft switch. Pressing the power supply switch is called hard switch. Illumination:

1、Auto resume after power failure

If the DVR is shut down abnormally, it can automatically backup video and resume previous working status after power failure.

2、Replace the hard disk

Before replacing the hard disk, the power supply switch in the real panel must be turned off.

3、Replace the battery

Before replacing the battery, the setting information must be saved and the power supply switch in the real panel must be turned off. The DVR uses button battery. The system time must be checked regularly. If the time is not correct you must replace the battery, we recommend replacing the battery every year and using the same battery type. Note: The setting information must be saved before replacing the battery otherwise information will lose.

1.3 System Login

When the DVR boots up, the user must login and the system provides the corresponding functions with the user purview. There are two user settings. The names are **admin**, and **default** and these names have no password. **Admin** is the super user purview; **default**"s permissions are preview and video playback. User **admin**"s password can be revised, while their permissions can"t be revised; user **default** is the default login user whose permission can be revised but not its password.

Password protection: If the password is continuous wrong three times, the alarm will start. If the

password is continuous wrong five times, the account will be locked. (Through reboot or after half an hour,

the account will be unlocked automatically).

Safety Question: When you forget the password, you can click "?" to enter the reset password page. Note: The default is no safety question. You can set the safety question on the account page . If the answer is continuous wrong six times, the page will be locked (you have to reboot the device to continue the operation)

1.6 Desktop shortcut menu

In preview mode you can right click mouse to get a desktop shortcut menu, as the picture shows. The menu includes: main menu, Guide, Quick set, record mode, playback, IPC param,PTZ control, coaxial control,TVI&AHD signal switch、 High Speed PTZ, Alarm Output, color Setting, Output adjust, Logout, view mode shift.

Shortcut Menu

1.6.1 Main menu

When you login, the system main menu is shown as below.

Main Menu

1.6.2 Record Control

Please check current channel status: "o" means it is not in recording status, "•" means it is in recording status.

You can use desktop shortcut menu or click [system]> [record]> [record mode] to enter the recording control interface.

Record Mode

[Schedule] Record according to the configuration.

[Manual] Click the all button and the according channel is recording no matter the channel in any

state.

[Stop] Click the stop button and the according channel stops recording no matter the channel in any state.

1.6.3 Playback

There are two methods for you to play the video files in the hard disk.

- 1. In the desktop shortcut menu.
- 2、Main menu>Record->Playback

Note: The hard disk that saves the video files must be set as read-write or read-only state.

video playback

1	Playback control	2	Operation	3	Video type	4	Time display
5	Switch by time/file	6	Search the file	7	Channel selection	8	Date selection
9	HDD selection	10	Synchronous	11	Time display	12	Listed files
13	File Attributes						

[Listed files] Look up the listed files that accord with the searching criteria.

[File Attributes] Look up the found file information.

[Playback control] See detail in below chart

Button	Function	Button	Function
	Play/Pause		Backward play
0	Stop		Slow play

	Edit	æ	backup

Playback control key

Note: play under frame by frame, the playback status should be paused firstly. Special functions:

Accurate playback: Input time (h/m/s) in the time column and then click button. The system can operate accurate playback according to the searching time.

Local zoom: When the system is in single-window full-screen playback mode, you can drag your mouse in the screen to select a section and then left click mouse to realize local zoom. You can right click mouse to exit.

Note: When current resolution of the channel is over Max resolution, to playback this channel, will show a Red "X".

1.6.4 Alarm output

Please check current channel status: "○" means it is not in alarming status, "●" means it is in alarming status.

You can use desktop shortcut menu or click [main menu]> [alarm]> [alarm output] to enter the alarm output interface.

*Some series have no alarm output

SAlarm Out	put	$\overline{\mathbf{x}}$
Alarm Type Schedule Manual Stop Status	All	1

Alarm output

[Configuration] Alarm is on according to the configuration.

[Manual] Click the all button and the according channel is alarming no matter the channel in any state.

[Stop] Click the stop button and the according channel stops alarming no matter the channel in any state.

1.6.5 PTZ control

*PTZ control is a little different between hybrid mode & full digital mode:

Digital channel – the digital channel need link PTZ, the remote device should connect with PTZ and with protocol correctly set also.

Analog channel – Only when the device is connect with PTZ and configure protocol correctly is ok.

1. Operation interface is as followed. The functions include: PTZ direction control, step, zoom, focus,

iris, setup operation, patrol between spots, trail patrol, boundary scan, assistant switch, light switch, level rotation and so on.

Note1. Decoder A(B)line connects with DVR A(B)line. The connection is right.

- 2. Click [main menu] >[system configuration] >[PTZ setup] to set the PTZ parameters.
- 3. The PTZ functions are decided by the PTZ protocols.

PTZ Contro	ol:04	<u> </u>
	Speed	5 Hide
		Preset = Start
🖃 Zoom	PTZ Tra Page Swi	

PTZ

[Speed] Set the PTZ rotation range. Default range: 1 ~ 8.

[Preset] Add, delete, call preset

Add: Input preset numbers in the preset number box, and rotate the PTZ to the designated position by controlling the direction control key and then click the "+"button to complete adding;

Preset point deletion: input the preset number which you want to delete in the preset number box ,click "-" button to complete the deletion of preset points;

Preset point call: fill in the preset point number in the preset number box ,click on the start button to call the preset point.

[Zoom] / H button to adjust the zoom multiple of the camera.

[Hide] Current interface will be temporarily hidden after click it.

[Direction control] Control the PTZ rotation. 8 directions control is supportive.(4 directions in

Front panel is supportive)

[High speed PTZ] Full-screen show channel image. Left press mouse and control PTZ to rotate

orientation. Left press mouse and then rotate the mouse to adjust the zoom multiple of the camera.

[Advanced] enter the advanced PTZ settings interface, you can point to the cruise cruise, patrol,

focus and other operations;

[Page switch] Switch between different pages.

[Cancel] Exit the PTZ function

2. Click [Page Switch] button, then you can set auxiliary function. Auxiliary number corresponding to auxiliary switch on the decoder.

PTZ Control:02	\sim
Direct Aux Ope Light 🔻	Open Close
Aux Num Ope	Open Close
	Page Switch Cancel

Auxiliary Function Control

[Intuitive Auxiliary Operation] choose auxiliary equipment, select Open or Close button, switch control;

[Auxiliary Number] The operation of corresponding auxiliary switch according to PTZ agreement;

[Page Switch] click Page Switch button to enter the PTZ Main Menu page, the menu itself can be control by the menu control buttons

PTZ menu

3. Advanced

click on the[Advanced] button to enter a new operation page as shown below

PTZ Config	Increase the cruise line Delete the cruise line
	Tour Start Pattern Start Delete the navigation-
☐Resume ■ Focus & ■ Iris &	Left AutoPan Right Flip AutoScan Reset

Advanced function

[Resume] resume the PTZ to restore default.

[Focus]Click "-" / "+" button to adjust the focus of the camera (require the camera support auto focus).

【Iris】 Click "-" / "+" button to adjust the iris of the camera(require the camera support aperture). 【Tour】Add a plurality of preset points to set a cruise line and call the cruise line, then the pan will run on the cruise line.

PTZ Config	\sim
Preset	Start
MD Inter∨al	3
Exist Preset	
Add Preset	Del Preset

For the first time to add a cruise route, click the "+" button to enter the cruise route:

Tour

In the preset drop-down box, select the preset point that needs to be added to the cruise route, set the interval time (between 3-255 seconds), and then click the "add preset" button to complete the preset point.

Click the "start" button to call the selected preset point, click "del preset "ou can delete the preset point in the cruise line; check the drop-down menu you can view the current cruise line has been added to the preset point number.

[Pattern]: Control the pan movement, the back-end device will record the running track of the pan, and then call the trail, pan will be repeated in accordance with the recorded track. When you first add the trace, click on the "+" button to enter the track settings page:.

Pattern

You can control pan movement by the PTZ key, zoom, focus and aperture ,then click "OK" to finish [Autoscan] Set the two boundaries in the horizontal direction of the left and right sides and then call

the scan, the pan will run between the left and right boundaries in the horizontal direction.

Click on the "left" button and then control the pan tilt using the horizontal arrow keys. when it arrive the position then click "right" button to finish the setting. Click the "Autoscan" button to call the scan, click the stop button to stop calling.

[AutoPan] Click on the "AutoPan" button, the pan will rotate (relative to the original position of the camera for horizontal rotation). Click the stop button to stop the AutoPan

[Flip] click on the "Flip"button, the pan will start to flip.

[Reset] the pan will restart, and all the data will be restored default.

1.6.6 Coaxial control

The coaxial control function allows the video recorder to transmit the control signal to the front-end camera through the coaxial cable. using these control signals, the recorder can control the PTZ, menu and other functions of the front camera.

Note: it require the front-end camera also support this function

Coaxial control

[1 channel selection] select the channel by clicking the drop-down menu;

[2 adjust the front-end camera"s parameter] adjust the parameters of the front-en camera by dragging the mouse or check the function;

[3 ok] enter OSD menu or ok function

[4 Direction key] Control the OSD menu by four key;

1.6.7 Color setting

*Color config:analog channel can config its own color,digital channel can config front-end image(only NETIP-conformed device is supported,ONVIF-conformed device is not supported)

Set the selective image parameters (current channel for single window display and cursor place for multi-

window display). You can use the desktop shortcut menu and enter the interface. The image parameters

include: tonality, brightness, contrast, saturation. You can set different parameters at different time sections.

Color Setting

1.6.8 Output Adjust

*Hybrid mode is with black margin vertical & horizontal, while full digital mode without.

Adjust TV output area parameters. You can use the desktop shortcut menu or enter [main menu]> [management tools]> [Output adjust].

Output Adjust	×
Top Deflate	•
Bottom Deflate	•
Left Deflate	O
Right Deflate	•
Black vertical	5 0
Black horizontal	_ 50
Display Settings Brightness Contrast Saturation Hue	VGA/HDMI ▼ 50 50 50 50 50 50 50 50 50 50 50 50
	Advanced OK Cancel

Output Adjust

Note: The black margin vertical & horizontal at output adjust of hybrid mode is only effect to analog channel.

1.6.9 Logout

Logout, shut down the system or reboot up. You can use the desktop shortcut menu or enter [main menu].

Picture 3.17Logout/Shutdown/Reboot the system

[logout] Quit the menu. Offer password next entrance.

[shut down] Quit the system. Turn off the power supply.

When press the shut down button, there is schedule hint. After three seconds, the

system is shut down. Cancel midway is of no effect.

[reboot] Quit the system. Reboot up the system.

1.6.10 Window switch

Preview in single window/four windows/eight windows/nine windows/sixteen windows according to your choice.

Note: different video input number have different switchable preview picture.

1.6.11 Quick-set

Only network channel has quick-set function ,you can quickly add a remote device to the network channel.

Click on the "+" sign in the preview screen, pop up the digital channel configuration wizard page, add the remote device to the DVR/NVR network channel.

1.6.12 IP parameter

This function is only available in all digital and hybrid channel modes and it is used to set the remote IPC camera parameters, the gray character indicates that the remote device does not support this function. You can adjust the various front-end parameters of the connected IPC, such as exposure mode, day / night mode, image style, day and night switching threshold, AE sensitivity, AGC, WDR, de-fog, corridor (some models support this function), slow shutter, day / night noise level, mirror, anti-flicker, flip, IR swap and so on.

Note: Only when the NVR successfully connected to the company's IPC (using NETIP protocol) and in a single connection can support the function, if you connected to third-party IPC (usding ONVIF protocol) can"t support this function.

System > IP0	C param.		×
Channel	3 -		
		Minimum time	Maximum time
Exposure mode	Auto 🔻	0.256	65.536 millisecond
AE reference	50	Defaults	50
day/night mode	automatic 🔻	IR_Cut	IR Synchron -
Image style	Style 2 🔻	Profiles	automatic 🔻
ICR Threshold	30	BLC	Ο
AE Sensitivity	5	Auto Iris	0
Automatic Gain		Upper limit	50
WDR	0	Upper limit	50
Defogging	Ο	grade	50
Corridor mode	Ο	Slow shutter	weak 🔻
DayNTLevel	3 🔹	NightNTLevel	3
	Anti flicker	□Overturn	□IRSwap
			Update OK Cancel

[Exposure mode] You can set the exposure time ,choose auto or manual from 1/50 to1/1000S,the exposure time more longer, the image more brighter.

[Day/Night mode] You can modify the camera Day/Night mode manually.:

Auto: the image can be color or B&W depending on the light;

Color: the image will always be color;

Black and White: the image will always be color;

[BLC] can close/open this function, when you open BLC(Black Light Compensation), In the bright background environment ,it is still able to see the central scene of the main scene.

【 Auto Iris 】 can close/open this function, This feature requires the camera to mount a lens that supports auto iris.

[AE Reference] set the camera"s exposureSet the camera exposure, between 0 to 100 optional, the greater the reference value of the screen ,the more bright.

[ICR Threshold] it is relate to IRCUT swap mode:

IR_CUT automatically switch: the critical point for color and black/ white switching, the Day/Night conversion threshold greater ,the higher brightness from color to black.

IR_CUT IR synchronous switch: Day/Night conversion threshold 10-20 close anti-shake function, 21-30 anti-shake time is 3S, 31-40 anti-shake time is 4S, 41-50 anti-shake time is 5S.

[AE Sensitivity]. The higher the sensitivity, the switch will be faster.

[AGC] can close/open this function, when you open this function, it can automatically adjust the camera's sensitivity to adjust the image brightness according to the ambient light changes

[WDR **]** can close/open this function, when you open this function, it can adjust the "Upper limit" to see the main scene in the center of the screen clearly in the strong light background.

【Defogging】 can close/open this function, when open this function, The picture permeability can be improved in fog or haze weather, the higher the lever is ,the better the defoging effect

Corridor mode Ican close/open this function, when open this function, When the corridor mode is on, the camera screen will display in corridor mode (Only some models can support this function).

[Slow Shutter] there are four choose :none, low, medium, high. The brightness is increased by the frame accumulation, and extend the exposure time to enhance the image sensitivity at low illumination.

[IR_CUT] can be set as automatically switch or IR synchronous switch

automatically switch: swap ICUT according to the actual environment ;

IR synchronous switch: swap ICUT according to the IR lamp status ;

[DayNTLevel] When the light is sufficient, the level to eliminate the noise in the preview screen, the higher the level the better the noise reduction effect.

[NightNTLevel] When the light is insufficient, the level to eliminate the noise in the preview screen, the higher the level the better the noise reduction effect.

[Mirror]: Enable it ,the preview screen flip 90° left and right

[Flip]: Enable it ,the preview screen flip 90° up and down

[Anti-flicker]: Remove the horizontal scroll stripes in the preview screen in the fluorescent environment.

[IR Swap]: use when the ir_cut in reverse order.

1.6.13 AHD&TVI&CVI Signal Switch

This function is supported by only part of the models with analog channel, it can control the signal mode

of each channel. You can right-click to enter the shortcut menu, Or you can double-click the icon in the bottom left corner of the channel, then you can switch the AHD&TVI&CVI Signal

you can also directly through the left mouse button double-click the channel at the bottom of the signal switch icon to achieve the signal AHD & TVI & CVI signal switching.

		Α	Advanced OK Cancel

Record Configuration

[Channel] Choose the corresponding channel number to set the channel. Choose the all option to set the entire channels.

[Redundancy] Choose the redundancy function option to implement the file double backup function. Double backup is writing the video files in two hard disks. When you do the double backup, make sure that there are two hard disks installed. One is read-write disk and the other is redundant disk. **[Length]** Set the time length of each video file. 60minutes is default value.

[Pre-Record] Record 1-30 seconds before the action. (time length is decided by the code stream) [Record mode] Set video state: schedule, manual or stop.

Schedule:Record according to the set video type (common, detection and alarm)and time section.

Manual:Click the button and the according channel is recording no matter the channel in any state.

Stop:Click the stop button and the according channel stops recording no matter the channel in any state.

[Period] Set the time section of common recording, The recording will start only in the set range.[Record type] Set recording type: regular, detection or alarm.

Regular:Perform the regular recording in the set time section. The video file type is "R". **Detection:**Trigger the "motion detect", "camera mask" or "video loss" signal. When above alarm is set as opening recording, the "detection recording" state is on. The video file type is "M".

Alarm:Trigger the external alarm signal in the set time section. When above alarm is set as opening recording, the "detection recording" state is on. The video file type is "A".

2.2.2 Playback

Refer to chapter 1.6.3.

2.2.3 Backup

You can backup the video files to external storage through setup.

Note: The storage must be installed before the file backup. If the backup is terminated, the already backup can playback individually.

	Record > Backup			
0	Name(Type)	Remain/Total	Device Status	Detect
				Backup
				Burning
				Erase
				Stop
			ĸ	
	 I	I		
				Cancel

Backup

[Detect] Detect the storage connected with the DVR such as hard disk or universal disk.

[Backup] Click backup button and the dialog box is popped up. You can choose the backup file according to the type, channel and time.

[Burning] the file will be burned synchronously after click it.

[Erase] Choose the file to delete and click erasure to delete the file.

[Stop] Stop the backup.

2.3 Alarm Function

Alarm functions include: motion detect,video blind, video loss, alarm input and alarm output, abnormality, intelligent analysis.

2.3.1 Motion Detect

When system detects the motion signal that reaches the set sensitivity, the motion detect alarm is on and the linkage function is turned on.

Note: "Advanced" button is the same as right click.

*Motion detect function is different between Hybrid mode & Full digital mode:

Digital channel: not only to enable motion detect function at local side, but also to enable the remote device that was connected. when remote device detect motion movement, local side will start alarm recording, otherwise this function is not enable.

Hybrid mode: only need to enable motion detect function at local side.

😤 Alarm > Moti	on Detect			X
Channel Sensitivity	1 ▼ Middle ▼	Enable Region Set		
Period AlarmOut Record Channel Tour	Set 1 1234 1234	MD Interval OutDelay	2 Sec. 10 Sec.	
PTZ Activation Show Message Buzzer FTP upload	Set	PostRec Send Email Write Log Mobile reportec	10 Sec.	
			Advanced OK	Cancel

Motion Detection

[Channel] Choose the set motion detect channel.

[Enable] means that the motion detect function is on.

[Sensitivity] Choose in the six options according to the

sensitivity,Lowest,Lower,Middle,High,Higher and Highest.

Note: Only the motion detect under hybrid mode/ full analog mode have this function of setting sensitivity, and also only the analog channel can set region.

[Region] Click [set] to enter the set area. The area is divided into PAL22X18. Red block means the motion detect defensive area. White block means the unfenced area. You can set the area as followed, Drag the mouse and draw the area. Default: all selected blocks are detection area.

Note: Only the motion detect under hybrid mode/full analog mode have this function of setting region, and also only the analog channel can set region.

Region

[Period] Trigger the motion detect signal in the set time section. You can set according to week or set uniformly. Each day is divided into four time sections.■ means the set valid.

set the time section

[Interval]Only one alarm signal is turned on even there are several motion detect signals in the set interval.

[Alarm output] Start the external equipment of corresponding linkage alarm when the motion detect alarm is turned on.

[OutDelay]Delay a few moments and stop when the alarm state is turned off. The range is 10~300 seconds.

[Record channel] Choose the recording channel (multiple option supportive). Trigger the video signal when the alarm is turned on.

Note:Set in the [recording setup] and perform the linkage recording. Start detecting video files

in the corresponding time section.

【Tour】 ■ means that the selective channel is single window alternate patrol preview. The interval is set in the [Main Menu]>[System] > [Tour].

[PTZ Activation] Set the PTZ activation when the alarm is turned on.

*Hybrid mode, PTZ link to the related PTZ information of analog channel, While digital

channel model, the PTZ is link to the related PTZ information on the remote device connected.

Note: to link PTZ, need go [Shortcut menu]->[PTZ control] to set preset point, cruise between points & interval time, etc.

PTZ Ad	tivation	2
Channel1 Channel3	None O Channel2 None O Channel4 	None

PTZ Activation under hybrid mode

[PostRec] When alarm is over, recording will last some seconds (10~300sec), then stop.

[Show message] Pop the alarm information dialog box in the local host computer screen.

[Send EMAIL] means sending an email to user when the alarm is turned on.

Note:Set in the [NetService] and send email.

(FTP upload) to tick it, the video & picture of related record channel & snapshot channel will be uploaded to assigned position.

Note: FTP upload need be set at [Netservice]

[Buzzer] When alarm happens, device will come out with buzzer.

[Write Log] when an alarm occurs, the device write a log which you can check on the [Info]>[Log].

[Mobile reported] when alarm happens, the alarm information will be push to your mobile client.

Note: Before use this function, you need to enable the PMS or mobile report in [main menu] >

[system] > [NetService]. And you should install our APP and add the DVR to the APP.

2.3.2Video Blind

When the video image is influenced by the environment such as bad brightness or reaching the set sensitivity parameter, the camera mask function is turned on and the linkage function is turned on.

*Same as motion detect function, video blind is different between Hybrid mode & Full digital mode:

Digital channel: not only to enable video blind function at local side, but also to enable the remote device that was connected. When remote device with video blind, local side will start alarm recording, otherwise this function is not enable.

Hybrid mode: only need to enable video loss function at local side.

Note: "Advanced" button is the same as right click.

⊚Alarm > Vide	o Blind			×
Channel Sensitivity	1 Middle	Enable		
Period AlarmOut Record Channel Tour	Set 1 1234 1234	OutDelay	10 Sec.

		·	Advanced	OK Cancel

Video blind

Set method: refer to chapter 4.3.1. Motion detect

2.3.3 Video Loss

When the equipment can not obtain the channel video signal, the video loss alarm is turned on and

the linkage function is turned on.

*Same as motion detect function, video loss is different between Hybrid mode & Full digital mode: Digital channel: not only to enable video loss function at local side, but also to enable the remote device that was connected. when remote device with video loss, local side will start alarm recording, otherwise this function is not enable.

Hybrid mode: only need to enable video loss function at local side.

Note: "Advanced" button is the same as right click.

Narm > Video Loss

		OK Cancel

Abnormal

Event Type Storage Storage Error, Storage No Space, Net Disconnection and IP Conflict.

[Enable] Select it to make sure abnormal function workable

[Show message] Automatically alarm cue dialog box come out of the main screen

[Buzzer] Device will have one long nosie "di" while alarm is happening

[Mobile reported] When alarm happens, it will send an email to user.

[Send Email] When alarm happens, the alarm information will be push to your mobile client.

2.3.7 Intelligent analysis

*Note: only part of product support this function at present.

To analyze the video image, when system detect object that meet pre-set algorithm rules and fit set flexibility and minimum image distance, will trigger video analysis alarm, and enable the linkage function.

*only the 1st channel of full analog mode and hybrid mode can support this function, and if this function is enabled, then video blind is invalid.

Intelligent analysis setting page

[Channel]only shows by "1", at present, only the 1st channel with maximum resolution of 1080P in the full analog(DVR) mode and hybrid(HVR) mode

[Enable] tick it to enable the video analysis function, then can go for further setting,

[Algorithm] at drop-down box, Perimeter alert, Items care and Video Diagnosis to choose the algorithm rule of detection.

[Rule] choose different algorithm rules, the related setting page is different.

Perimeter alert:

- Show traces: tick it to enable, when alarm triggers, there will be red box around moving objects.;
- Sensitivity, base on different requirement, there are 3 options in the drop-down box, Higher, Middle and Lower;
- > Minimum image distance range between 0~30 %, the more flexible the less image distance.;
- Alert way there are 2 kinds: cordon and warning area. Cordon: Can set 3 prohibited directions: bidirectional prohibited, from top to bottom (from left to right), from bottom to top (from right to left), when the setting cordon is too slope, show with from left to right / from right to left, otherwise will be from top to bottom / from bottom to top, when the moving object meet preset cordon rules, the alarm will be triggered; Warning area: can set 3 kinds of prohibited directions: bidirectional prohibited, enter and leave, when the moving object meet preset warning area rules, alarm will be triggered.

Rule click set, enter rule setting page, right click mouse, choose add, use mouse to fix two or more point, and then connect them to form a line or a irregular region, after that a box of prohibited direction options will come out, choose one of them, right click mouse, click Yes, return to previous page, click Yes, alarm rules setting is finished.

Perimeter alert		×

2.4.2 Encode setup

*Encode settings is for analog channel only.

Set the video/audio code parameter: video file, remote monitoring and so on. Set every main stream parameter in the left part, and set the extra stream parameter in the right part.

Note: extra stream introduces video compression technique which was applying for multi-channel playback simultaneously, Dial-up multi-channel real-time monitor under poor bandwidth, or mobile monitor and so on.

🖻 System > Enco	ode							×
Channel	1	┓						
Compression	H.264	5	Extra Stream	•				
Resolution	1080P	•	CIF	•				
Frame Rate(FPS)	15	•	6	•				
Bit Rate Type	VBR	•	VBR	•				
Quality	high	•	low	•				
Bit Rate(Kb/S)	2707	•	136	•				
I Frame Interval	2	•	2	•				
Video/Audio	O							
H264+								
Coding mode	High Profile	•						
				,	Advanced	ОК	Cancel	

Independent channel code setting

[Channel] Choose the channel number.

[Compression] Standard H.264 main profile.

[Resolution] Resolution type:1080P/720P/960H/D1/ HD1/CIF / QCIF.

[Frame Rate] P:1 frame/s~25 frame/s; N: 1 frame/s~30 frame/s

[Bit Rate Type] You can choose limited code stream or variable code stream. When you choose the variable code stream there are six image quality options. Under the limited code stream, you can choose the code stream manually;

[Bit Rate] Set the code stream value to modify the image quality. The larger code stream value the

better image quality.

1080P(1024~8192kbsp) 720P(1024~4096kbps) 960H(869~4096kbps) D1 (512~2560kbps) HD1 (384~2048kbps) CIF (64~1024kbps), QCIF(64~512kbps)

[Frame Interval] can choose the range 2~12s

[Video/Audio] When the icons are all in reverse displayed, the video file is video and audio multiplex stream.

Extra stream Settings

[Extra stream] is used for client side monitoring & mobile monitoring.

[Channel title] select channel title and then to choose whether need enable video & audio. The resolution, frame rate, bit rate type settings is the same as main stream.

[Coding mode] There are three codind mode: High Profile, Main Profile amd Baseline which you can choose when you click the drop-down menu. High Profile is the best, Baseline is the worst.

2.4.3 Network setup

🗟 System > Net	twork		×
Net Card	Wire Netcar 🔽 🗆 DHCP	Enable	
IP Address	10 . 10 . 208 . 88		
Subnet Mask	255 . 255 . 255 . 0		
Gateway	10 . 10 . 208 . 1		
Primary DNS	192 . 168 . 1 . 1		
Secondary DNS	8 . 8 . 8 . 8		
Media Port	34567		
HTTP Port	80		
HS Download	0		
Transfer Policy	Quality Prefe 🔻		
			OK Cancel

Network

[Net Card] You can choose cable network card or wireless network card.

[DHCP Enable] Obtain IP address automatically(not suggested)

Note: DHCP server is preinstalled.

(IP address) Set the IP address. Default: 192.168.1.10.

[Subnet mask] Set the subnet mask code. Default: 255.255.255.0.

[Gateway] Set the default gateway. Default: 192.168.1.1.

[DNS setup] Domain Name Server. It translates the domain name into IP address. The IP address is offered by network provider. The address must be set and reboot then it works.

[Media port] Default: 34567.

[HTTP port] Default: 80.

(HS Download) It can improve the speed of downloading video files if enable HS download.

(Transfer Policy) There are three strategies: self-adaption, image quality precedence and fluency precedence. The code stream will adjust according to the setup. Self-adaption is the tradeoff between the image quality precedence and fluency precedence. Fluency precedence and self-adaption are valid only when the assistant code stream is turned on. Otherwise image quality precedence is valid.

2.4.4 NetService

Choose the network service option and click the set button to configure the advanced network functions or double click the service button to configure the parameters.

Display

[Channel Title] Click the channel name modify button and enter the channel name menu. Modify the channel name. The 16 Chinese characters and 25 letters are supportive.

【 Time Display 】 means the selective state. Display the system data and time in the surveillance window.

[Channel display] means the selective state. Display the system channel number in the

surveillance window.

[Record Status] means the selective state. Display the system recording status in the surveillance window.

【 Alarm Status 】 means the selective state. Display the system alarm status in the surveillance window.

[Transparency] Choose the background image transparency. The range is 128~255.

[Resolution] set display resolution.

[Channel] Choose the set code output channel number.

[Region Cover] means the selective state. Click the cover area button and enter the corresponding channel window. You can cover the arbitrary using mouse. (Black region is for output)
 [Time display] and [Channel display] set the display position of channel title and time title.

*the channel no., region cover, time title and channel title setting function exist at output mode only when the device is under hybrid(HVR) mode or full analog(DVR) mode.

2.4.6 PTZ device /RS485 device

* When under hybrid mode/full digital mode, it shows with PTZ device and RS485 device;*When under full digital mode, it will show RS485 device only.

System > PTZ Config

Config Name Device Type IP Channel Device address Port User Name	chConfig02 IPC Protocol NETIP
0 Device Na	ame Device Info. IP Address Port
	▶
	Protocol All Search OK Cancel

the device list searched under remote channel setting

Channel Status:

Channel status is to show the status of all the digital channel When there is what existing, status

including Max Resolution, This Resolution, Connection Status.

For example: The channel status for 2+2 mode is as below:

Channel	status			× ×
Channel D03 D04	Stream 4M 4M	Mainstream/Sub-Stream 960P Unknown	Connection Status Connected NoConfig	
		*		
				Cancel

D03 channel is connected, and D04 channel doesn"t add the remote device.

Remark: when the current resolution is over the max resolution that the channel supported, then a red "X" will be shown on the preview image, for example: Under full digital channel mode, Max resolution of channel 3 is D1, if it was connected to a device with resolution over D1 (such as 960H), you will see below pic:

Channel type:

ChannelTy	pe			$\overline{\mathbf{x}}$
